

# Micronized Sugar Beet

Micronized Sugar Beet is made from pure unmolassed sugar beet pulp which has not had molasses added to it and is therefore around 95% sugar free. Micronizing prevents the protein from denaturing allowing for quicker release of nutrients.

Micronized Sugar Beet is of particular relevance to the Equine industry, where it is used as a low sugar source of fibre. The fibre profile of sugar beet is ideal for horses. Equally divided between cellulose, hemicelluloses and pectins, beet provides fibres that can be fermented along the whole gut length at different rates, as well as providing slowly fermented fibre and much needed bulk.

Sugar beet is also particularly beneficial for dogs and helps gut function/digestion.

## Typical Analysis

Fresh Weight (%)	
Dry Matter	90
Moisture	10
Protein	10
Oil	0.7
Fibre	16
Ash	9

NOTE: Whilst every effort is made to ensure the accuracy of this document, the information provided is meant as a guideline only.

## Suitable For

Cattle, Sheep, Pig, Equine, Dog, Small Pet

## Available Formats

Flaked

## Packaging

25kg bag  
I.B.C. Tote 500kg - 1,000kg  
Bulk: Blown or Tipped
